Manage the settings for the spam filters (powered by Apache SpamAssassin™) for your email accounts. Identify unsolicited bulk mail and automatically delete it (Auto-Delete) from your email account. For more information, read the [Apache SpamAssassin](#) documentation.

[Spam Filters](#) / Overview

☒ Process New Emails and Mark them as Spam:

Apache SpamAssassin is **enabled**. This will mark suspicious email messages as spam. The server will update the header of new messages whose calculated spam score meets or exceeds the [Spam Threshold Score](#) (5).

Your hosting provider enables this feature by default. You **cannot** disable this feature.

☒ Move New Spam to a Separate Folder (Spam Box):

Spam Box is **enabled**. Spam Box will direct all new email messages with a calculated spam score that meets or exceeds the [Spam Score](#) (5) to a separate folder for you to review.

[Configure Spam Box Settings](#)

☐ Automatically Delete New Spam (Auto-Delete):

Auto-Delete is currently **disabled**. Enable this option to automatically delete spam messages. The Auto-Delete option permanently removes new emails with a calculated spam score that meets or exceeds the Auto-Delete Threshold Score.

We recommend that you use [Spam Box](#) instead of Auto-Delete because [Spam Box](#) allows you to recover messages marked as spam from your email account's spam folder.

[Configure Auto-Delete Settings](#)

Additional Configurations (For Advanced Users):

Most users will not need to customize these settings.

Lista blanca

Configure the whitelist settings for Spam Filters.

Spam Whitelist Items (whitelist_from) ?

Specify the email addresses that the system should **not** tag as spam. Do not whitelist your own domain (for example, `*@example.com`) because if you do, spammers who impersonate your domains may be more effective. You can also use the `"*"` and `"?"` wildcard characters for more flexibility. For more information, read our [Spam Filters](#) documentation.

whitelist_from X

+ Add A New "whitelist_from" Item
